On the cover

Energy Changing gear

© David Moir/Reuters

Today's global energy situation is vulnerable, dirty and expensive. Fortunately, we have the tools to make energy smarter, cleaner and more cost-effective. The smart solution is an energy mix based on better technologies and, above all,

greater efficiency. New strategies are affordable, but will only work if we embark on them without delay. With uncertainties surrounding global warming, price and security of supply, we must step up the momentum.
